

CRAFTY TUESDAYS

FILM CANISTER FLASHLIGHTS

Contributed by the 64th London Guides with similar instructions offered on GuideZone* by Anne of Thamesdale District Norlon Division, Trillium Area.

MATERIALS:

- 2 - 3/4" screws
- Screwdriver, scissors
- 1 mini Xmas light
- 2 film containers: 1 white & 1 black
- 9 volt battery

INSTRUCTIONS:

- 1.** Carefully cut off the bottom of the white container to create a tube.
- 2.** Align canister lids so that they are back to back (aka top to top).
- 3.** Push both screws, one at a time, through the lids from the inside of the lid (which is the bottom of the lid). The screws will align with the battery once in the canister.
- 4.** Remove some of the plastic on the light wire, exposing enough wire to wrap each wire individually onto a screw.
- 5.** Place the light in the white tube and attach bottom. The flashlight will turn on and off when twisting the tubes!
