

How to use:

- Fill an empty and clean can (e.g. soup can) with water and freeze until solid. (The ice will keep your lantern solid while hammering.)
- Print and cut out a trefoil logo template (below) and tape it to the outside of your can.
- With a hammer and nail, hammer gently on the dots to create small holes for the light to shine through. Remove paper when finished.
- Once ice thaws, dry the can and add a candle or light inside your lantern. Let it glow as you shine your Guiding light on February 22!
