Paper Lantern Craft

for World Thinking Day

Materials

- Craft Sticks
- Tracing paper
- Scissors
- Pencil
- Markers
- Glue and/or hot glue and glue gun
- LED tealight candle

Optional

- Metallic washi tape
- Trefoil cutout/template

Instructions

1. Glue four craft sticks together to make one side of the lantern. Repeat this step four times to get each side. If you want to add a base to the lantern, make one more craft stick square.
2. Cut out four square pieces of tracing paper. (We used one of our craft stick squares from step 1 as a measure).
3. Decorate your four tracing papers. This will be where your light shines through.
4. Glue your decorated papers on to each one of your craft stick squares.
5. Glue the sides together using a hot glue gun. You can also use regular craft clue but it will take extra time to dry.
6. Place an LED tealight candle inside your lantern and you are all set for World Thinking Day.

Optional: Decorate the lantern edges with washi tape or stickers.
