

HOW TO GROW A PLANT IN A BALLOON

You will need:

- A large balloon, light colours are best
- ½ cup of Dirt from the garden (not potting mixture)
- ¼ cup of water
- Funnel
- Radish seeds

Strain the dirt to remove any rocks or pebbles. Blow up the balloon as big as it can go without popping it. Let the air out. Put the funnel nose into the top of the balloon and carefully and slowly pour the dirt into the balloon. Pour in the water and a few of the radish seeds.

Gently tap the balloon to make sure everything has fallen down if it got stuck on the inside walls of the balloon.

Clean off any dirt from the opening of the balloon and blow up your balloon. Tie it closed and set gently on a windowsill or hang from the curtain rods.

Watch your plant grow.
